PROFESSIONAL SUMMARY

Full-stack engineer specializing in high-stakes integrations (Plaid, Stripe, TransUnion, AWS Bedrock). I build production systems that move money, verify identity, and automate complex workflows. Looking for a fast-moving team where I can build impactful products and continue growing as an engineer.

WORK EXPERIENCE

RentZoro
Software Engineer

May 2025 - Present
Toronto, ON

- Architected and led development of core platform features using Next.js and TypeScript, designing scalable, multi-tenant workflows supporting thousands of tenant screenings across Canada.
- Mentored developers and led architectural decisions, improving code quality, engineering standards, and sprint execution across the team.
- Designed and launched Express Screen, a real-time tenant verification system integrating TransUnion, Plaid, Veriff, Bynn, and AWS Bedrock for automated identity, financial, and document analysis.
- Engineered asynchronous workflows to orchestrate external API calls, ensuring reliable aggregation of credit, income, identity, and background data.
- Built the core logic for ZoroScore, a proprietary risk-scoring engine that automates tenant decisions by aggregating financial, identity, and behavioural data.
- Led engineering initiatives supporting SOC 2 Type II certification, including audit logging, access controls, secure infrastructure workflows, and internal security best practices.

Bracer EV
Software Engineer

April 2024 – April 2025
Mississauga, ON

- Built a full-stack inventory management platform using Next.js, Python, Fast API and PostgreSQL, integrating Amazon SP-API and WooCommerce Admin API for real-time syncing of inventory, listings, and orders across all selling channels.

YA Solutions Inc
Software Engineer Intern (Frontend)

April 2023 – August 2023
Toronto, ON

- Built and deployed high-performance marketing websites using Next.js, Tailwind CSS, and Python, improving load times by 40% and increasing lead conversion by 20% through SEO and analytics optimization.
- Developed cross-platform desktop tools for client-specific internal automation and data visualization.

PROJECTS

InkSpace

inkspace.dev

- Architected and built an AI-powered management suite for 40+ tattoo artists using NestJS, Next.js, PostgreSQL, BullMQ, and Docker, replacing fragmented Instagram DM and spreadsheet workflows with a structured lead pipeline and booking system.
- Built a multi-provider authentication service in Typescript supporting Google OAuth and Microsoft OAuth 2.0.
- Developed a public artist intake link system with AI-driven lead triage that ranks inquiries and auto-drafts replies in the artist's voice, kanban pipeline management, scheduling with proposal/confirmation flows and Google Calendar sync, Stripe Connect deposits with cash/e-transfer reconciliation, and waiver e-signing with audit trail.

TECHNICAL SKILLS

Backend: Node.js, Express, Typescript, Python, PostgreSQL, MongoDB, Prisma, Docker, Resend, NestJS, Fast API
Frontend: Next.js, React, Typescript, JavaScript, React Native, HTML5, CSS#, Tailwind, ShadCN UI, Material UI
DevOps: Vercel, Git, AWS (S3), CI/CD, Serverless Architecture, Jira, Agile Development
Integrations & APIs: AWS Bedrock, Plaid (bank connections & financial data), TransUnion (credit pulls), Bynn (document verification), Veriff (identity analysis), Stripe, Shopify Admin API, Amazon SP-API, Eleven Labs
